About

With a degree in Information Security from UNIASSELVI and have completed a Full Stack Web Development program from Trybe. With over 8 years of experience in IT infrastructure, including computer networks and hardware, as well as electronic security, I have extensive experience with CFTV systems. I am passionate about technology and enjoy tackling challenges that require logical thinking and creative solutions.

Skills

HTML | CSS | Javascript | Typescript | ReactJS | React Native | Swift | SwiftUI | Node.js | Python | SQL | NoSQL | MuSQL | MongoDB

Experience

I worked as a **Full Stack Developer** on the Back-end for 9 months, contributing to important project deliveries. Among these deliveries, I am particularly proud to have worked on the development of the e-commerce tracking feature. At the time, we were facing an issue of losing nearly 30% of tracking online purchases. With my team, we implemented this functionality and managed to reduce the loss to less than 5%.

I have been working as a **Mobile Developer** for 9 months and have already participated in several important deliveries, including complete module refactoring and significant performance improvements. However, I take special pride in developing the feature of favoring products in our e-commerce app, which I built almost entirely on my own. This feature resulted in an increase of nearly R$44 million in the company's GMV. This project was a significant technical challenge that required me to learn new technologies and develop new skills.

Education

Bachelor Degree, Information Security

Technical Course, Full Stack Web Development
Bootcamp, Full Stack Development
Free Course, Typescript, TDD, DDD, Clean Architecture, and SOLID
